[A biojet takes off from Nevada](#)

Aero L-29 is [the name](#) of the first biofuel-powered jet that flew into the sky from [Reno](#), Nevada. The jet is fueled with [biodiesel](#), but the development [team](#) is planning to switch to [algae fuel](#).

This is the first jet which is 90% powered by biofuel. There were biojets before, but they were using only 20% of biofuel, and the rest was regular fuel. “This proves that we can make our planes environmental-friendly and supply ourselves with energy.” says Douglas Rodante, CEO of GFP.
